## Spinnaker to Neurolab [Spin2Neu]

### Introduction

The Spin2Neu design aims to deliver and receive data to a spinnaker through 2 different unidirectional links: the input SpiNNaker Link and the output SpiNNaker link.

The user sends data to spinnaker by using the *Axi4 Stream Output Bus lines* and receives data from spinnaker by using the *Axi4 Stream Input Bus lines*.

The user can control the whole data processing thanks to the AXI 4 Lite Bus interface that is able to communicate with the Spin2Neu internal registers that will be detailed in Section 4.

#### 1.1 Input SpiNNaker Link

The input SpiNNaker Link consists in 7 data wires named *data\_2of7\_from\_spinnaker* and an acknowledge wire *ack\_to\_spinnaker*.

#### 1.2 Output SpiNNaker Link

The output SpiNNaker Link consists in 7 data wires named *data\_2of7\_to\_spinnaker* and an acknowledge wire *ack\_from\_spinnaker*.

In the Table 1 the input and output ports of the Spin2Neu module are listed.

**Table 1 Spin2Neu interface signals description**

Comment	Port name	Width	Dir	Description
AXI4 Lite Bus lines	S_AXI_ACLK	1	I	AXI Clock, System clock line
	S_AXI_ARESETN	1	I	AXI Reset active low line
	S_AXI_AWADDR	32	I	AXI Write address
	S_AXI_AWVALID	1	I	Write address valid
	S_AXI_WDATA	32	I	Write data
	S_AXI_WSTRB	4	I	Write strobes
	S_AXI_WVALID	1	I	Write valid

## *Spinnaker to Neurolab [Spin2Neu]*

### **2 THEC Spin2Neu Diagram**

The Figure 1 shows all the modules used in the Spin2Neu design. The Spin2Neu design integrates the following modules that will be explained into the respective subsections into the next chapter:

- Spinn\_Neu I/f,
- CoreMonSeq,
  - Monitor,
  - TimeStamper,
  - AEXSequencer,
  - InFifo,
  - OutFifo
  - Timestamp wrap detector,
- AXI Stream I/f,
- AXI Lite REGs I/f.

## Spinnaker to Neurolab [Spin2Neu]

**Figure 1 Spin2Neu architecture**

## *Spinnaker to Neurolab [Spin2Neu]*

### **3 Main components of the Spin2Neu architecture**

In this Section we will describe the main components of the Spin2Neu architecture.

#### ***3.1 Spinn\_neu I/f***

This module (coming from the University of Manchester) is used to interface the *Spinnaker input link* and *Spinnaker Output link* with, respectively, the *output AER I/f* and the *input AER I/f*.

#### ***3.2 CoreMonSeq***

The *CoreMonSeq* module by using one Input Fifo and one Output Fifo can manage the two events data flows that are the two spinnaker links. Using an internal 32 bit counter, it can identify any data with the specific time stamp.

##### **3.2.1 Monitor**

This module extract the data from the output AER I/f and feeds the InFifo with the data and relative time stamp.

##### **3.2.2 Timestamper**

This module is a 32 bit counter used to identify the events coming from/to the spinnaker links.

##### **3.2.3 AEXSequencer**

This module takes the data coming from the OutFifo and generates (depending on the timing information inside the couple Data/Timestamp of the OutFifo) the AER Input I/f of the *Spinn\_neu I/f* module.

##### **3.2.4 InFifo**

This Fifo is 2048 data of 64bit length. Both Fifo ports are 64 bits sized.

##### **3.2.5 OutFifo**

This Fifo is 2048 data of 64bit length. The input port is 32 bits sized and the output port is 64 bits sized.

##### **3.2.6 TimeStampWrap detector**

This module is used to detect the wrapping of the *Timestamper*.

#### ***3.3 AXIStream I/f***

The *AXIStream I/f* interfaces the AXI stream output and input I/f with the FIFOs interfaces.

#### ***3.4 AXI4Lite I/f***

The AXI4Lite I/f module is used to interface the CPU with the internal Spin2Neu registers.

## *Spinnaker to Neurolab [Spin2Neu]*

### **4 Spin2Neu internal registers**

In this Section a detailed view of the registers internal to the Spin2Neu module.

	Offset	Mnemonic	Description	Type	Reset Value
	0x00	Control register (CTRL_REG)	Control register	rw	0x0?000000
	0x08	RX DATA buffer register (RXDATA_REG)	RX Data Buffer	ro	0x00000000
	0x0C	RX Time buffer register (RXTIME_REG)	RX Time Buffer	ro	0x00000000
	0x10	TX Data buffer register (TXDATA_REG)	TX Data Buffer	rw	0x00000000
	0x14	DMA register (DMA_REG)	DMA Burst Register	rw	0x00000100
	0x18	RAW Status Register (STAT_RAW_REG)	Status RAW register	ro	0x00000000
	0x1C	IRQ Register (IRQ_REG)	IRQ register	rc	0x00000000
	0x20	Mask Register (MSK_REG)	Mask register for the IRQ_REG register	rw	0x00000000
	0x28	Wrapping TimeStamp Register (WRAPTimeStamp_REG)	Wrapping TimeStamp Register	rc	0x00000000
	0x5C	Identification register (ID_REG)	ID Register	ro	0x53324E10

## Spinnaker to Neurolab [Spin2Neu]

### 4.1 Control register (CTRL\_REG)

This register is used to control the Spin2Neu IP.

**CTRL\_REG (Spin2Neu Base + 0x00)**

Reset Value: **0x0?000000**

31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16
Reserved					Local Far LB	Local LB	Remote LB	Reserved							
					ro	ro	ro								
15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
Reserved			Rearm DMA	Reserved							Flush Fifos	Reserved	IE enable	EN DMA	Reserved
			wc								wc		r/w	r/w	

- En DMA
  - If '1' the DMA I/f is enabled
- IE Enable
  - If '1' the Spin2Neu generates Interrupt depending on the unmasked bit of
- FlushFifo
  - If '1' the internal Spin2Neu Fifos are flushed. It's automatically cleared by the hardware.
- RearmDMA
  - If '1' the DMA is re-armed. It's automatically cleared by the hardware.
- Remote Loopback,
- Local Loopback and
- LocalFar Loopback
  - See **Error! Reference source not found.** for details.

## Spinnaker to Neurolab [Spin2Neu]

### 4.2 RX DATA buffer register (RXDATA\_REG)

This register contains the data (read from the InFifo) coming from the output AER I/f of the Spinn\_neu I/f module.

**RXDATA\_REG (Spin2Neu Base + 0x08)**

Reset Value: **0x00000000**

- Data
  - 32 bit length data

## Spinnaker to Neurolab [Spin2Neu]

### 4.3 RX Time buffer register (RXTIME\_REG)

This register contains the timestamp associated to the received data (see RX DATA buffer register (RXDATA\_REG)) from the output AER I/f of the Spinn\_neu I/f module.

The time stamp value read from this register is the time stamp that the Spinn2Neu module sticks to the received Data available into the RX DATA buffer register (RXDATA\_REG).

**RXTIME\_REG (Spin2Neu Base + 0x0C)**

Reset Value: **0x00000000**

- TimeStamp
  - 32 bit length data

## Spinnaker to Neurolab [Spin2Neu]

### 4.4 TX Data buffer register (TXDATA\_REG)

This register is used to fill the OutFifo.

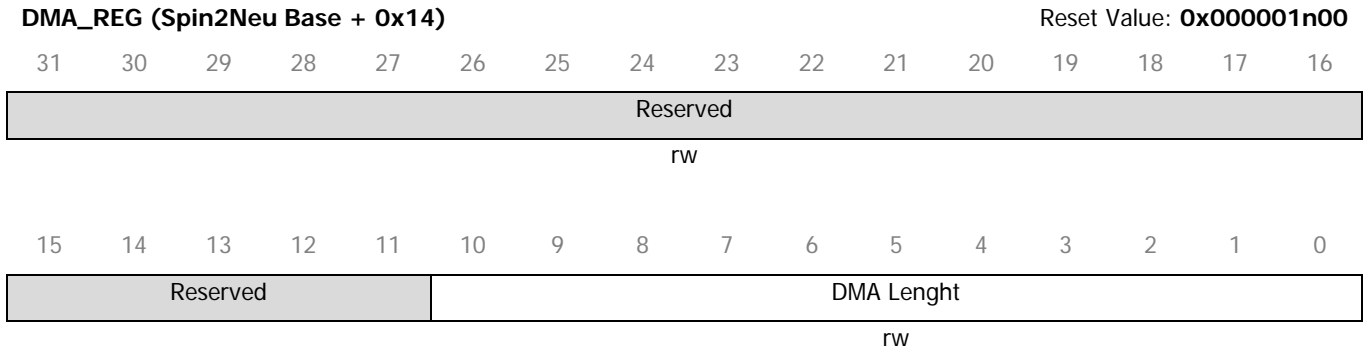

When writing to this register, keep in mind that it is used by the internal hardware as follows: The register needs to be written twice to enable the correct behaviour. The first data written into the register represents the time, elapsed which, the second written data into this register is delivered to the Spinn\_neu I/f module.

## Spinnaker to Neurolab [Spin2Neu]

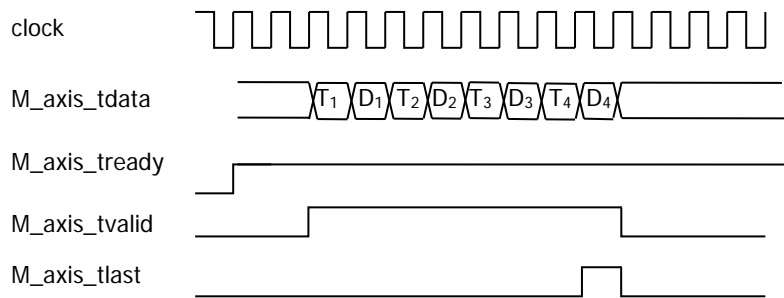

### 4.5 DMA register (DMA\_REG)

This register is used to set the behaviour of the AXISStream interface. It represents the number of data (32 bit size length) sent to the DMA interface.

NOTE: This register can be written only if CTRL\_REG.ENDMA='0'.

For example, if it is set to 8, the burst from/to the AXI Stream I/f will be in terms of 8 data length.

## Spinnaker to Neurolab [Spin2Neu]

### 4.6 RAW Status Register (STAT\_RAW\_REG)

When read, this register gives a snapshot of the status of warning or errors signals. It is a Read Only register.

**STAT\_RAW\_REG (Spinn2Neu Base + 0x18)**

Reset Value: **0x00000000**

31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16
Reserved															
15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
Reserved	RxModeErr	RXParityErr	TxDumpMode	Reserved		RX FIFO Not Empty	RxBu fferReady	Time Stamp Wrapped	Reserved	TX Data Full	TX Data Almost Full	TX Data Empty	RX Data Full	RX Data Almost Empty	RX Data Empty
	ro	ro	ro			ro	ro	ro		ro	ro	ro	ro	ro	ro

- RxDataEmpty
  - When '0', the INFIFO is not empty
  - When '1' the INFIFO is empty
- RxDataAlmostEmpty
  - When '1' the INFIFO has 1 or 0 data to be read.
  - When '0' the INFIFO has more or equal two data to be read.
- RxDataFull
  - When '1' the INFIFO is full.
  - When '0' the INFIFO is not full.
- TxDataEmpty
  - When '0', the OUTFIFO is not empty
  - When '1' the OUTFIFO is empty
- TxDataAlmostFull
  - When '1' the OUTFIFO has 2047 or 2048 data within himself.
  - When '0' the OUTFIFO has less than 2047 data within himself.
- TxDataFull
  - When '1' the OUTFIFO is full.
  - When '0' the OUTFIFO is not full.
- Time stamp wrapped (this bit is high for one clock period only, when the counter wraps its value)
  - When '1' the counter inside the TimeStamp module has wrapped its value.
  - When '0' the counter inside the TimeStamp module has not yet wrapped its value
- RXBufferReady
  - When '1' the Rx Fifo has at least DMA\_REG value of data available
  - When '0' the Rx Fifo has less than DMA\_REG value of data available
- RXFifoNotEmpty
  - When '1' the RX Fifo is not empty.
  - When '0' the RX Fifo is empty
- TxDumpMode
  - When '1' the spinn\_neu I/f module through its in\_mapper module has highlighted a DumpMode event.
- RXParityErr
  - When '1' the spinn\_neu I/f module through its out\_ module has highlighted a Parity error event.
- RxModeErr
  - When '1' the spinn\_neu I/f module through its spinn\_receiver module has highlighted a Rx Mode error event.

## Spinnaker to Neurolab [Spin2Neu]

### 4.7 IRQ Register (IRQ\_REG)

When read, this register gives the status of the collected warning or errors signals. It is a Read/Set register, i.e., to clear the warning/error bit the user has to write '1' on the corresponding bit position.

#### IRQ\_REG (Spinn2Neu Base + 0x1C)

Reset Value: **0x00000000**

31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16
Reserved															
15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
Reserved	RxModeErr	RxParityErr	TxDumpMode	Reserved			RX FIFO Not Empty	RxBu fferReady	Time Stamp Wrapped	Reserved	TX Data Full	TX Data Almost Full	TX Data Empty	RX Data Full	RX Data Almost Empty
	r/c	r/c	r/c				r/c	r/c	r/c		r/c	r/c	r/c	r/c	r/c

The meaning of the masked contributors of this register is the same of the RAW Status Register (STAT\_RAW\_REG).

## Spinnaker to Neurolab [Spin2Neu]

### 4.8 Mask Register (MSK\_REG)

This is the Mask register used to mask the contributors for the interrupt signal.

**MSK\_REG (Spin2Neu Base + 0x20)**

Reset Value: **0x00000000**

31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16
Reserved															
15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
Reserved	RxModeErr	RXParityErr	TxDumpMode	Reserved		RX FIFO Not Empty	RxBu fferReady	Time Stamp Wrapped	Reserved	TX Data Full	TX Data Almost Full	TX Data Empty	RX Data Full	RX Data Almost Empty	RX Data Empty
	r/w	r/w	r/w			r/w	r/w	r/w		r/w	r/w	r/w	r/w	r/w	r/w

The meaning of the masked contributors of this register is the same of the RAW Status Register (STAT\_RAW\_REG).

## Spinnaker to Neurolab [Spin2Neu]

### 4.9 Wrapping TimeStamp Register (WRAPTimeStamp\_REG)

This register is used to read how many times the internal 32bit counter of the TimeStamp module has wrapped its value.

In case the user writes any value in this register, it will be cleared and also the internal 32bit counter of the TimeStamp module will be cleared.

**WRAPTimestamP\_REG (Spinn2Neu Base + 0x28)**

Reset Value: **0x00000000**

## Spinnaker to Neurolab [Spin2Neu]

### 4.10 Identification register (ID\_REG)

This register contains the ID of the Spinn2Neu module.

**ID\_REG (Spin2Neu Base + 0x5C)**

Reset Value: **0x53324E10**

31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16
